

Project Manager Development Program (PMDP)

AGC's Project Manager Development Program (PMDP) is geared specifically to the topics early-career project managers need. The construction-specific program curriculum has been developed, updated, and field-tested by and for contractors. The program covers the essentials of project management for emerging project managers and provides a solid foundation for long-term career development.

PMDP participants are likely to have various titles depending on the kind of work they perform, the geographical location of their projects, and the size of their company. They may have titles such as assistant project manager, project manager, field engineer, project engineer, project administrator, etc. They may have experience as estimators, field personnel, project assistants, or office managers, and they may work in the heavy and highway sector, the commercial building sector, or in residential construction. They will most likely be early in their careers, have some post-high-school education, and less than two years of project-related experience.

PMDP TOPICS INCLUDE:

- Module 1 | Estimating and Job Costing
- Module 2 | Contract Administration
- Module 3 | Project Administration
- Module 4 | Risk Management
- Module 5 | Leadership

PMDP is a nationally recognized training standard. Individuals who complete all five PMDP courses will receive an AGC Project Manager Development Program Certificate of Completion.

“The smaller class presentations and knowledgeable examples were great, and the instructor makes a point to get everyone involved in discussions. He has an immense amount of knowledge on the subjects, which lends a great degree of excellence to the courses.”
